DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 9-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 9, lines 6-7, "a bias signal" has already been recited in claim 1.

Claim 10 is rejected for the reasons discussed above with claim 9.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Hsieh (USPN 4,902,910). Hsieh discloses, in Fig. 8, a circuit comprising: "a power supply voltage level follower unit (4-1A)"; "a power supply voltage detection unit (4-2A)"; "a reset prevention unit (80 and 83)" having a "delay unit (80)"; "a buffer unit (202)"; and "an inverter (4-2B)", all connected and operating similarly as recited by Applicant. Reference is made to Fig. 9 which shows the corresponding operation.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2816

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsieh (USPN 4,902,910) in view of Lovett (USPN 5,889,416). The above-discussed circuit to Hsieh does not teach the express details for the NAND gate 83 of Fig. 8. The reference to Lovett discloses in Fig. 13 an improved NAND gate having the benefit of uniform slew rate. This NAND gate includes “a first pull-down means (1014 and/or 1016)”; “a first pull-up means (1006 and/or 1008)” and “a second pull-up means (1002)”. Therefore, it would have been obvious for one skilled in the art to use the specific NAND gate taught in Fig. 13 of Lovett for the broad NAND gate 83 of Fig. 8 of Hsieh to obtain the expected advantage of uniform slew rate in the NAND gate.
